

CERAMIC PACKAGES

FEATURES

- 96% Ceramic
- 500°C operation
- Any shape
- Any size to 12 inches square
- Any thickness to 2 inches
- Any style feed-thru
- Integral Circuitry
- Hermetic Seal
- Minimal NRE cost

Ceramic, hermetically sealed packages can be fabricated in very large sizes. A 17 x 22 inch package is a reality should such be needed. Prototype and low volume production for small and large packages can now be achieved using our novel fabrication process. Literally any package can be fabricated. Any thickness can be achieved along with complex shapes. Packages can contain feed throughs of any shape and can also be provided with integral conductive circuitry and solderless HEL-TAC® contacts. Essentially any package design can be fabricated regardless of complexity, electrical I/O, optical I/O, or mechanical appliances.

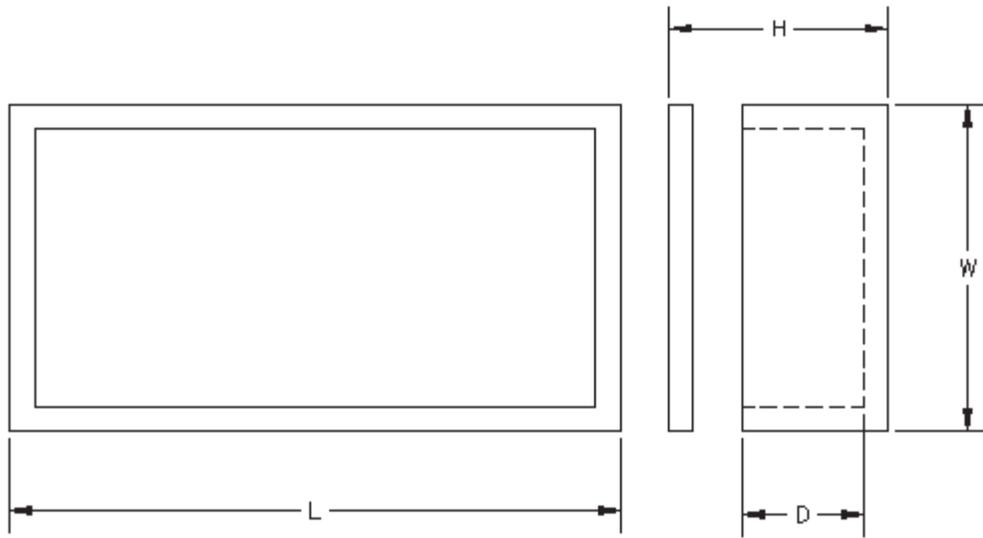

Hi Performance, High Temperature Packages

CERAMIC SUPPLY INTERNATIONAL, INC.

Packages can be fabricated in any dimension within our maximum standard size of $W = 6''$ and $L = 12''$. The height (H) and depth (D) are also selectable and can equal W or 6 inches. This means that almost any configuration from a .250 inch square up to a 6 inch by 12 inch package can be manufactured with very little tooling cost and in quantities starting with one piece.
